Introduction

TrotelCoin is a cryptocurrency designed to provide an interactive way of understanding how cryptocurrencies work. It was launched in May 2023 by two engineering students with the aim of providing educational resources on crypto operations.

The project involves the development of a website dedicated to learning about cryptocurrencies. The platform will offer educational resources to provide a comprehensive understanding of cryptocurrencies.

Additionally, interactive quizzes and activities will be provided to engage users and help them earn TrotelCoin as they progress through the learning process. The main objective of the project is to create an immersive learning experience that facilitates knowledge acquisition and practical application of cryptocurrency operations.

In the future, the project aims to expand its offerings by providing resources on how to launch one's own cryptocurrency project. Additionally, there are plans to potentially develop a new platform to assist aspiring cryptocurrency creators. The project aims to cater to a wide audience, particularly targeting younger individuals, by providing inclusive educational resources and opportunities for engagement.

Mission and Vision

MISSION

At TrotelCoin, our mission is to empower individuals with the knowledge and tools to navigate and thrive in the world of Web3. We provide a comprehensive educational platform that simplifies complex concepts and offers practical examples for learning about transactions, DeFi, and more. Our goal is to democratize access to decentralized finance, foster a vibrant community, and drive widespread adoption of Web3 technologies.

VISION

Our vision at TrotelCoin is to create a world where individuals have the knowledge and capabilities to fully embrace the potential of web3. We envision a future where people from all walks of life can confidently navigate the crypto ecosystem, make informed transactions, and actively participate in the decentralized finance (DeFi) movement.

Short and long term vision

Deploying the token

Allocate our resources towards building reserves for future airdrops, rewards, and initiatives, ensuring long-term sustainability.

Listing on CEX, CoinGecko and CMC

Our goal is to list the \$TROTEL token on major platforms, facilitating widespread adoption and accessibility for users.

Create the platform

We aim to build a user-friendly platform that empowers individuals to learn and explore the world of crypto, fostering education and understanding.

In the short term, our vision is to establish TrotelCoin as a leading educational platform, providing accessible and comprehensive resources for individuals to learn about cryptocurrencies, blockchain technology, and decentralized finance (DeFi). We aim to build a strong and engaged community, fostering knowledge-sharing and collaboration among learners.

Looking ahead, our long-term vision is to become the go-to platform for individuals seeking to understand and navigate the world of Web3. We envision a future where TrotelCoin serves as a hub for not only education but also practical application, enabling users to confidently transact, participate in DeFi protocols, and explore innovative blockchain solutions. We strive to drive widespread adoption of cryptocurrencies, revolutionize the financial landscape, and empower individuals to take control of their financial future in a decentralized and inclusive manner.

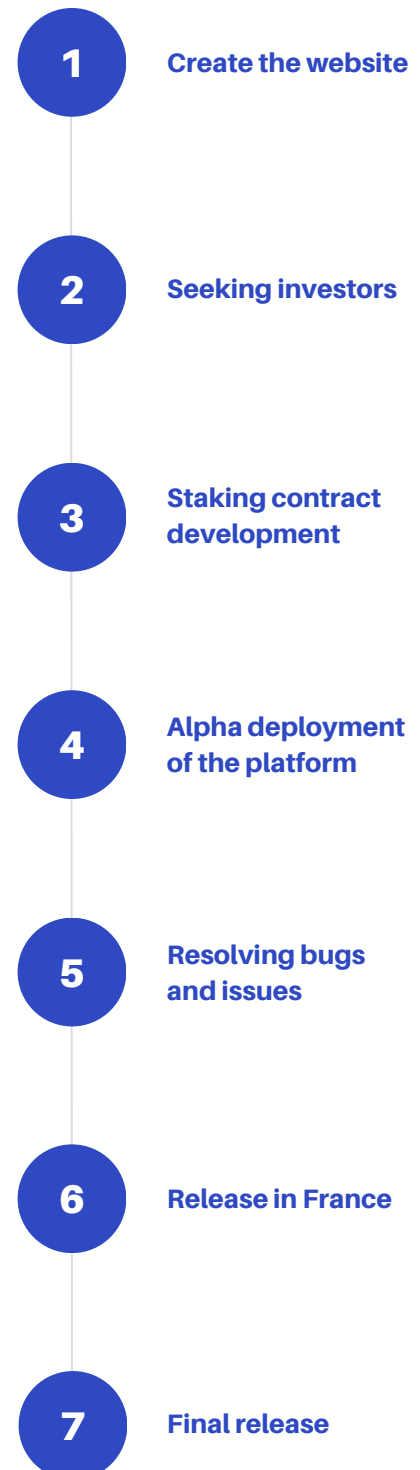

Roadmap

Initially, our focus will be on developing the website, which will feature interactive resources such as videos, courses, and quizzes to engage and educate users about cryptocurrencies, while also enabling them to earn TROTEL tokens.

Additionally, we plan to enhance the platform's appeal and effectiveness by implementing a staking contract development, offering additional incentives and benefits to potential investors, thereby encouraging their active participation in our project.

After the initial development of the website, our priority will be to release the first version for testing purposes by a panel of users. This phase will allow us to gather valuable feedback and identify any necessary improvements or fixes. Once these adjustments have been made, we will be ready to extend the project to cater to a broader audience, specifically targeting French-speaking individuals.

Subsequently, we will implement support for the English language, enabling a wider reach and accessibility for users worldwide.

Tokenomics

Project and Initiative	Rational
TrotelCoin	The token's name, TrotelCoin, pays homage to the founder of the project, Alexandre Trotel, as a symbol of his vision and commitment to driving innovation in the crypto space.
\$TROTEL	Easy to use and recognize.
Binance Smart Chain	To prioritize security and instill trust, we will secure a locked liquidity pool on PancakeSwap, conduct comprehensive KYC verification for our team, and subject our code to rigorous audits by trusted third-party firms.
Initial supply of 100 000 \$TROTEL	At launch, all \$TROTEL tokens have been mined, with no further minting possible. 50% of the tokens are locked in a liquidity pool on PancakeSwap, 10% is reserved for future airdrops, 25% is allocated for future platform rewards, and the remaining portion is used for private sales and strategic purposes.

To contribute to the liquidity pool on PancakeSwap, investors can provide an equal value of Binance Coin (BNB) and \$TROTEL tokens, which will be locked in the pool. This process helps to enhance the liquidity of the \$TROTEL token, enabling users to trade it seamlessly while maintaining stability. By participating in the liquidity pool, investors not only contribute to the ecosystem but also have the opportunity to earn fees from transactions made on PancakeSwap using the \$TROTEL token.

A pool tax of 0.25% is implemented to support project operations, including platform development, marketing efforts, and other essential activities, ensuring the long-term growth and success of the project. By contributing to the pool, users not only benefit from the liquidity and stability it provides but also contribute to the ongoing growth and sustainability of the project. The generated funds from the pool tax are allocated towards driving the project's progress, ensuring continuous improvements, and expanding its reach to a wider audience.

We have made the decision not to burn tokens as part of our project strategy. By not implementing token burning, we aim to maintain the existing token supply and avoid potential disruptions to the ecosystem. This approach allows for stability in token value and ensures that all tokens can continue to be utilized within the project's ecosystem, including for future rewards, airdrops, and other initiatives. By keeping the token supply intact, we provide a consistent and reliable experience for our community and maintain the intended distribution and utility of the tokens.

Utility

The project's primary objective is to provide comprehensive education on the workings of cryptocurrencies, accompanied by a rewarding system that acknowledges users' progress.

As users enhance their skills, competencies, and interest in the world of cryptocurrencies, rewarding them with TrotelCoin serves as a valuable incentive that not only involves them in the crypto ecosystem but also guides them through their initial trades. It acts as a tutorial for navigating the crypto landscape.

By serving as an accessible entry point for new crypto users, it aims to foster the expansion of crypto communities while nurturing knowledge and engagement within the space.

In the future, we have plans to implement a feature where users can access courses on project development in the field of cryptocurrencies. These courses will provide valuable knowledge and insights on various aspects such as ideation, technical implementation, financial considerations, and more.

After completing our courses, users will have the knowledge and tools necessary to independently launch their own crypto projects. We aim to provide guidance, educational resources, and support to empower individuals in realizing their ideas and achieving success in the decentralized crypto space. Our goal is to foster innovation and enable individuals to independently navigate the process of launching and developing their unique projects within the crypto industry.

STAKING

We have the aim to develop a staking platform for the \$TROTEL token to provide our users with an additional way to participate in and benefit from our project. By implementing a staking platform, token holders will have the opportunity to lock their \$TROTEL tokens for a designated period, contributing to the stability and security of the ecosystem. In return for staking their tokens, participants will earn rewards in the form of additional \$TROTEL tokens. This staking mechanism incentivizes token holders to actively engage with the project and contribute to its growth while also offering them the potential for increased token holdings over time. Ultimately, the staking platform aims to create a mutually beneficial environment, fostering loyalty and value appreciation for our token holders while reinforcing the long-term sustainability of the project.

PANCAKESWAP

The liquidity pool on PancakeSwap aims to provide a reliable and accessible platform for users to trade the \$TROTEL token, enhancing liquidity, stability, and wider adoption.

TROTELCOIN

The aim of our platform is to provide users with a comprehensive and user-friendly educational resource, simplifying complex concepts and empowering them to navigate and understand the world of cryptocurrencies.

CONCLUSION

In conclusion, our white paper outlines a comprehensive and innovative project that aims to revolutionize the world of crypto education. Through our web3 platform, users will have access to interactive resources, earning opportunities, and a community-driven ecosystem that fosters learning and collaboration.
